Blue Responsibility: Using renewable energy sources to heat drinking water

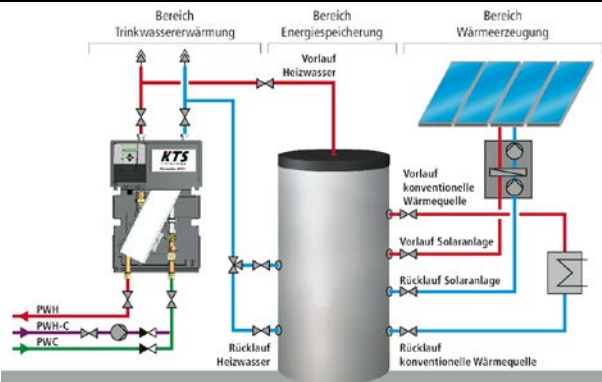

01: Hot water storage tanks storing solar energy must be equipped with a scald protection system, such as Honeywell's TM200.

Source: Honeywell – Haustechnik GmbH

02: System diagram: scald protection in water heating installations. When the cold water supply is interrupted, hot water inflow is automatically stopped, unless the hot water temperature is 10 K lower than the selected mixed water temperature.
